

**Aircraft Push-Back
System Cable
P/N 41035G-05**

INSTALLATION SHEET

The aircraft push-back cable is used to interface between a Gateway Wireless System and a low impedance military aircraft that accepts a U-174/U connector. One end of the cable connects to the Push-Back Gateway U9920-GPB (P/N 40993G-01) and the other end connects to the aircraft input port. If the connection at the aircraft contains a PTT switch, a special cable may be required to bypass this PTT switch.
